

HENRY AGUKWE CHUKWUEBUKA

Full Stack Developer | Lagos, Nigeria | Remote-Ready

+2349034400634 | henryagukwe01@gmail.com | [linkedin.com/in/henry-agukwe](https://www.linkedin.com/in/henry-agukwe) | github.com/TheDEV111 | kairos-devs.com

PROFESSIONAL SUMMARY

Full Stack Developer with 3+ years of experience building data-driven web applications, order management systems, and API-backed dashboards used by real businesses in production. Proficient in React.js and Next.js on the frontend, Node.js and Python on the backend, with solid SQL schema design and query optimisation experience across PostgreSQL and MySQL. Experienced designing and securing RESTful APIs with authentication and role-based access control, writing responsive interfaces that hold up across devices, and maintaining Git workflows, code reviews, and automated tests as daily practice. Comfortable working remotely with clear written communication and end-to-end feature ownership.

TECHNICAL SKILLS

Frontend: React.js, Next.js, TypeScript, JavaScript (ES6+), HTML5, CSS3, Tailwind CSS, Redux, React Query, responsive design

Backend: Node.js, Express.js, Python, FastAPI, Go, REST API design, authentication, access control

Authentication: JWT, OAuth2, Privy, role-based access control, session management, referral token systems

SQL Databases: PostgreSQL, MySQL: schema design, query writing, joins, indexes, query optimisation, transactions

NoSQL & Caching: MongoDB, Mongoose, Redis: caching, session management, real-time data

API Integration: Third-party REST API integration, webhook setup, async data flows, error handling, pagination

Testing: Jest, React Testing Library, Mocha, unit testing, integration testing, regression checks

Git & Workflow: Git, GitHub, semantic commits, pull requests, code reviews, branching strategies, GitHub Actions CI/CD

Cloud & Ops: AWS (basic), Railway, Render, Supabase, Vercel, NPM/Yarn, Webpack, Vite

Communication: Remote-first async written communication, technical documentation, PRD authoring, cross-team collaboration

PROFESSIONAL EXPERIENCE

Lead Full Stack Developer | TruthChain (SaaS / Blockchain)

Sep 2025 – Present

- Designed and built a production SaaS dashboard from scratch using React.js, Next.js, TypeScript, and PostgreSQL, owning the full stack from SQL schema design and Node.js API services through to responsive frontend delivery.
- Built data-driven dashboard screens including real-time data tables, status tracking modules, filtering systems, and multi-step workflow UIs, optimised for fast load times on datasets with large record histories.
- Designed and optimised PostgreSQL database schemas with targeted query tuning for high-frequency dashboard endpoints, ensuring data accuracy and fast reads under real user load.
- Built and maintained RESTful APIs with JWT authentication, role-based access control, paginated data fetching, API versioning, and structured error handling, handling authentication and access control carefully throughout.
- Integrated multiple third-party service APIs, managing webhook configurations, async data flows, and error recovery to keep dashboard data accurate and up to date.
- Wrote Jest and React Testing Library test suites covering unit and integration scenarios, fixing reported issues with tests to ensure they stayed fixed. Led code reviews and maintained technical documentation for all APIs and components.
- Maintained clean Git workflows: semantic commits, descriptive PRs, feature branching, and changelog-friendly practices across the full engineering team. Set up GitHub Actions CI/CD pipelines covering lint, test, and deploy stages.

- Built responsive interfaces using Tailwind CSS that held up correctly across desktop, tablet, and mobile screen sizes, collaborating with designers via Figma throughout.

Full Stack Developer | HitoAI

Sep 2024 – Nov 2025

- Delivered production React.js and Next.js applications backed by Node.js and Python services, building responsive dashboard UIs and data-driven screens integrated with SQL and NoSQL databases across multiple platform modules.
- Designed and optimised MySQL database schemas and queries for data-heavy features, reducing query load times and improving system reliability under real production load.
- Built RESTful APIs with authentication, async data fetching, real-time UI updates, and Redis caching, improving API response times and reducing database round-trips across high-traffic endpoints.
- Wrote automated tests using Jest for unit and integration coverage, participated actively in code reviews, and maintained internal technical documentation. Monitored performance and resolved production issues proactively.
- Automated internal workflows using Python scripting, reducing manual effort by 30% and improving sprint delivery velocity. Communicated progress and blockers clearly in an async remote-friendly team environment.

Contract Full Stack Developer | Anamon.io

Feb 2026 – May 2026

- Contracted to build a multi-step order and workflow management platform using React.js, TypeScript, Node.js, Express.js, and PostgreSQL, taking full ownership from SQL schema design through to production deployment.
- Designed the PostgreSQL database schema on Railway, integrated Privy authentication, built a referral token system with audit trail, and configured automated webhooks to keep platform data consistent and reliable.
- Built responsive admin dashboard screens with React Hook Form-driven data entry, REST API integration, and precise state management across complex multi-step operational flows.
- Delivered features fully independently with clear written documentation at each stage, maintaining semantic commit conventions and structured PR workflows throughout the engagement.

Software Engineer Intern | Sharperly NG

Jun 2023 – Dec 2023

- Built and integrated backend APIs powering full-stack product features, contributing to debugging, performance tuning, and resolving 40+ reported bugs across QA cycles with tests added to keep them fixed.
- Built a reusable React and Tailwind CSS component library cutting feature development time by 20% across the team. Participated in code reviews and Agile ceremonies, writing clear documentation throughout.

PROJECTS

SeedFund <https://seedfund.kairos-devs.com>

Stack: Go, Next.js, TypeScript, Redux, PostgreSQL, Supabase

- Freelance full-stack platform with a Go REST API backend, PostgreSQL database layer on Supabase, Next.js frontend with Redux state management, and responsive screens across devices. Designed the full SQL schema, built and documented Go API services, and delivered the complete application end-to-end with authentication and access control handled throughout.

TruthChainn <https://www.truthchainn.com/>

Stack: React.js, Next.js, TypeScript, Node.js, PostgreSQL, Redis, JWT, Jest, GitHub Actions

- Production SaaS platform with data-driven dashboard screens, status tracking, and admin workflow modules. Designed the full PostgreSQL schema, built REST APIs with JWT authentication and role-based access control, implemented Redis caching for fast dashboard loads, and maintained Jest test coverage with GitHub Actions CI/CD throughout.

MetaAgent Finance <https://metagent-finance.kairos-devs.com/>

Stack: Python, FastAPI, LangChain, Redis, Supabase, PostgreSQL

- Full-stack platform with a Python backend API, PostgreSQL database layer, and React frontend. Resolved a critical production issue where database query latency was causing stale data in the dashboard, fixed by introducing Redis caching to serve fresh data without expensive round-trips on every load.

Trakitt <https://trakitt.com>

Stack: React.js, TypeScript, Node.js, MySQL, Redis, REST APIs

- Real-time order and status tracking platform. Built responsive dashboard screens with React.js, Node.js API services with MySQL query optimisation, and Redis caching to keep load times fast on stores with large order histories.

Anamon <https://www.anamon.io/>

Stack: React.js, TypeScript, Node.js, Express.js, PostgreSQL, Privy, Railway

- Contract multi-step workflow and order management platform: designed the PostgreSQL schema, built RESTful APIs with JWT authentication and access control, integrated third-party services via webhooks, and delivered responsive admin dashboard screens with full written documentation from spec to deployment.

EDUCATION

B.Sc. Computer Science, National Open University of Nigeria

2019 – 2024

ALX Software Engineering Programme, ALX Africa (Python, C, JavaScript)

Jan 2023 – Jun 2024

ACHIEVEMENTS

- Built and shipped five production full-stack applications across SaaS, fintech, and Web3 domains, including order tracking, data-driven dashboards, and workflow management platforms used by real users.
- 1st Place, MetaMask Dev-Cook Hackathon (2025): designed and shipped a complete fintech application with production REST API backend, SQL schema, authentication, and responsive frontend in 5 days.
- Co-Founder, TruthChainn: production SaaS dashboard platform with React frontend, Node.js backend, PostgreSQL schema, Redis caching, JWT authentication, and GitHub Actions CI/CD pipeline owned end-to-end.
- ALX Top 10% Graduate: completed 7+ engineering projects across Python, C, and JavaScript; peer-reviewed 60+ pull requests with written review feedback.
